Art Unit: 3738

DETAILED ACTION

Claim Objections

Claim 39 is objected to because of the following informalities: the claim depends from itself. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 38, 51-54, 56-58, 62, 63, 67-69, 73, 76-79 are rejected under 35

U.S.C. 102(b) as being anticipated by Buechel et al. (5702448). Fig. 1 shows a femoral head 18 having a convex articulating surface. Buechel et al. disclose a prosthetic device with a smooth articulating surface having a substrate coated with diamond, col. 10, lines 27-42 and col. 11, lines 1-4. Buechel also discloses to polish the coating, col. 8, lines 47-49 and col. 9, lines 23-25. See col. 6, lines 37-56 for metals used for the substrate. Buechel et al. additionally disclose that CoCr can be used as the metal, col. 10, lines 57-58. It is inherent that the materials have CTEs and moduli that are different. The coating formed on the substrate is crystalline in structure, col. 8, lines 1-2 and can be interpreted to include interstitial spaces in diamond layer since it has "pores" lines 4-6.

Claims 1-8, 16-18, 21, 23, 38-49,51-54,56-58,62-69 and 73-79 are rejected under 35 U.S.C. 102(b) as being anticipated by Pope et al. (5645601). Pope et al. disclose a femoral head made of metal, col. 3, lines 6, 7. Pope discloses the head has a diamond

Application/Control Number: 09/494,240

Art Unit: 3738

layer compact bonded to the substrate by sintering at high temperatures, col. 3, lines 29-33. The diamond is polished at an Ra value that falls within the claimed range of 0.005 to 0.5 microns. Since the process of coating the substrate with the diamond layer is performed the same way, the examiner asserts that the claimed measured properties (in this case, interstitial spaces in diamond layer and gradient zones) are present in the prior art to some extent even though they are not explicitly recited. Therefore, the examiner hereby burdens the applicant to show that these measured properties are not present in the prior art.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-8,16-18,21,23,38-49,51-54,56-58,62-69 and 73-79 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 41-49, 57-82 of U.S. Patent No. 6290726. Although the conflicting claims are not identical, they are not patentably distinct from each other

Application/Control Number: 09/494,240

Art Unit: 3738

because the claims are similar in scope with the femoral head being claimed in the present application and the combination of the head and its corresponding articulation surface in US PN 6290726. Therefore the present claims are read on by the patented claims; In re Goodman.

Response to Arguments

Applicant's arguments filed 1/15/02 have been fully considered but they are not persuasive. In response to Applicant's argument that Buechel does not include certain features of Applicant's invention, the limitations on which the Applicant relies (polycrystalline diamond compact on the surface of the femoral head) is not stated in the claims rejected upon by Buechel.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian Pellegrino whose telephone number is (703) 306-5899. The examiner can normally be reached on Monday-Thursday from 8am to 5:30pm. The examiner can also be reached on alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Corrine McDermott, can be reached at (703) 308-2111. The fax phone number for the organization where this application or proceeding is assigned is (703) 308-2708.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0858.
